Oakville
Hospital
Foundation

Points of Interest

This conceptual site plan has been developed by Halton Healthcare Services and Stantec Architecture in association with landscape architects from Vertechs Design Inc. The site diagram shows a possible layout for the new hospital on our 50-acre site. The location and configuration of buildings and specific departments will continue to be developed as project planning progresses.

1 Urban Plaza

Patients and visitors will drive into the heart of the hospital through an urban plaza by way of the future western road. We anticipate this main entranceway will be close to a multi-level parking structure. Inside the hospital's main entrance you will find the Information Desk, a central seating area, consumer health library and easy access to a number of retail outlets. Wayfinding will be simple and straightforward incorporating appropriate signage, landmarks and windows with exterior sightlines to help orient visitors to their location.

2 Ambulatory Care

Outpatient clinics will be located in the Ambulatory Care block. Departments in this area will include nephrology, outpatient rehabilitation, surgical clinics and outpatient mental health. Many of the patients who will come to this area have mobility issues and are frequent users of the hospital with regular appointments and treatments. Ideally the Ambulatory Care block will have multiple entrances with drop off points for patients and accessible and dedicated parking.

3 Emergency Department

The new department will be substantially larger than the existing Emergency Department with an increased number of exam rooms that will reduce wait times and support infection control. It will be conveniently located adjacent to the Diagnostic Imaging Department for quicker access to analysis. People coming to Emergency by car will park in a dedicated lot close to the department. Finding your way to the department will be quick and easy thanks to large windows that will allow for direct sightlines into the building from outside. An on-site helipad will allow for timely transfer of critically ill patients.

“The New Oakville Hospital will be a state-of-the-art facility designed with enhanced infection control practices that will help us provide the highest quality of patient-centred care to the residents of Oakville. This distinctive healthcare centre, with its new and expanded services, will also enhance our ability to attract some of the most talented doctors in Ontario to work with our team of skilled professionals.”

- Dr. Lorne Martin, Chief of Staff
Halton Healthcare Services

4 Civic Square

The Civic Square is a large outdoor area in a highly prominent location on the property. It will be an open public space with trees, foliage and places to sit. Patients, visitors and staff will have easy access to this space from nearby exits where they can enjoy their lunch outside or just sit and relax in the completely smoke-free grounds. This gathering space will provide the perfect setting for hospital and community functions and soften the hospital's exposure to high traffic areas.

5 Landscaping and Roadways

Meandering pathways, cycling paths, healing gardens and outdoor gathering areas are an important part of the design for the New Oakville Hospital. The entire site will be accessed by a network of vehicular, pedestrian, and bicycle "streets" to make getting around easy. Our landscape architects have been involved in the site's development since the beginning of this project to ensure these elements are part of the overall design process. In addition to providing a pleasing aesthetic, landscaping will be used to promote site circulation, reduce traffic noise and support sustainability on the site.

6 Inpatient Tower

The inpatient tower will be seven to ten storeys high providing patients with views of the Niagara Escarpment and Lake Ontario. The majority of the hospital's capacity for inpatient beds will be in the tower and will include inpatient mental health and medical and surgical inpatient units. Eighty per cent of the rooms will be single-patient rooms which will support and enhance infection control and allow for private time with family and friends.

“This is Oakville's hospital. As a community we have an incredible opportunity to build a hospital from the ground up. Together, we will create a leading-edge hospital facility with an innovative and nurturing environment that supports the physical, mental, emotional and spiritual needs of the community. And, that's why today's planning is so crucial. So we can provide Oakville with the best in hospital care today and tomorrow and leave a legacy for generations to come.”

“Oakville citizens should be united in reaching the goals that are integral to their community, and what could be more essential than a new hospital that can meet the needs of our growing population and provide the highest standards and state-of-the-art healthcare.”

- Eve Willis, Campaign Co-Chair

Oakville-Trafalgar Memorial Hospital (OTMH) has been a cornerstone of our community. For many residents born at OTMH or for those who have experienced outstanding medical care within its walls, OTMH is much more than another hospital, it's part of the family; it's part of our family.

Originally built to serve a population of only 17,000 almost 60 years ago, OTMH has seen multiple expansions over the years to accommodate growing demand. While each expansion provided more room, it also resulted in a fragmented structure where clinical services were located wherever space was available.

Building on the deep roots of our community, the New Oakville Hospital will take healthcare in Oakville to a new level. Situated on a 50-acre site, located at Third Line and Dundas Street, the new hospital will be more than double the current size of the current facility to meet the urgent needs of our community's growing and aging population.

The New Oakville Hospital will:

- Provide patient and family-centred care in a warm, friendly atmosphere
- Offer 80% single rooms for privacy and infection control standards
- Be equipped with the latest technology
- Offer new and expanded services, like cancer care and diagnostic imaging
- Be on the leading edge of design and environmental sustainability
- Set a benchmark for healthcare services in a community hospital

The benefits will be far-reaching, most immediately for our residents who will have access to the personalized care that we have always valued close to home, but within an innovative centre for medical excellence.

Now is the time for Oakville's extraordinary community, renowned for its generosity and commitment, to come together and help the Oakville

Hospital Foundation achieve its \$60 million campaign goal. With your help and support, we can build and equip a remarkable hospital that will respond to emergencies, mend broken bones, administer cancer care and promote all aspects of health in our local community.

We encourage you to join us and become involved with the New Oakville Hospital Campaign. We need your support for this unique, once in a lifetime opportunity. There are many ways for you, your family, your organization or company, your school or local community group to become involved with this historic opportunity. Please visit our website for additional information or contact Sheilaah Guthrie at the Foundation at 905-845-2571 ext 6382.

A Visionary Hospital.
For Life. For Growth. For Oakville.

Bill Cooper
Campaign Co-Chair

Eve Willis
Campaign Co-Chair

“The need for the New Oakville Hospital becomes more apparent every day. The existing site and facility can no longer accommodate any expansion to best serve the growing population of our town.

We are in a period of renewal and planning for our growth to meet our long term needs. The New Oakville Hospital clearly signals our commitment to the community to provide the very best health care possible.”

- Bill Cooper, Campaign Co-Chair
